CADWorx 2009 - New features in brief

This month, COADE Inc. is going to announce the release of **CADWorx 2009 Plant Design Solutions**. In order to give you a heads-up for this release here is an overview of the new features which you will see in CADWorx 2009:

CADWorx PID

- PID file Manager
- PID Title Block Manager
- PID Multiple Edit
- PID Valve Order Manager
- PID Block and Layer Manager

CADWorx Plant

- Intelligent Valve Operators
- Intelligent Insulation
- ISOGEN Assign Mark Numbers
- ISOGEN Dimension Control for Existing Components

CADWorx Steel

- Single Line Steel drawing generation
- Steel Live Database

CADWorx Plant Design Solutions have added a new product, **CADWorx Steel Professional Plus** which will include CADWorx Steel Professional and all new features such as the single line drawing generation recently released for beta testing. This has been done to eliminate the confusion of having CADWorx Steel Professional included in CADWorx Plant Professional. All Steel Professional licenses will automatically be converted to Plus. Steel Professional will still be included in CADWorx Plant Professional. The cost for Plus is the same as the previous Steel Professional.

CADWorx Equipment

- Nozzle on Nozzle components
- Nozzle Repad
- Nozzle Schedule

COADE Releases new CADWorx Design Review 2008

COADE has announced the release of **CADWorx Design Review 2008**, the first product developed specifically to provide faster and easier review of CADWorx and ancillary plant design models by designers, project managers, facility owners and other stakeholders involved in the review, modification and approval of the design prior to fabrication or construction. **CADWorx Design Review** makes collaboration efficient and fast because each stakeholder can see an accurate 3D model of how the design will look when completed, and its highly intuitive, interactive tools make it easy to produce review deliverables such as markups, comments and red-lining. It reduces the need to interpret the design using cumbersome paper printouts and other non-interactive tools, saving time and helping lessen the risk of overlooking design errors that would cost much more to fix later during fabrication and construction.

2008 CADWorx Users Conference

CADWorx Users throughout the world will visit COADE's headquarters in Houston to attend the first CADWorx Users Conference which will be held from October 20-22, 2008. COADE and ImageGrafix will post all necessary information to our web sites and will communicate, one-to-one with our CADWorx software users as soon as all the details are finalized. We intend to run a Contest picking one lucky CADWorx user for the grand prize which will be a fully-paid trip to Houston to attend the Conference. Wait for our next communication !

Current Versions of COADE Software

The CADWorx Webinar Series has been a great success with the average attendance approaching 40. To date COADE have held seven different webinar all of which are recorded and on the CADWorx User Blog for preview. If customers sign up for the webinar and are not able to attend an email reminder will be sent to them with information on the recording. COADE will be continuing this important series throughout the year. For registration go to:

Current Versions of COADE Software

Product	Version	Build Number	Build Date
CADWorx	2008	20071105	November 05, 2007
CAESAR II	5.10	080512	May 12, 2008
CodeCalc	2008	080101	January, 2008
PV Elite	2008	080101	January, 2008
TANK	3.00	071127	November 27, 2007

AutoCAD Electrical for the Process Plant Industry

AutoCAD® Electrical software is the leading application built specifically to create and modify electrical controls designs. AutoCAD Electrical automates many of the manual tasks associated with creating accurate, industry-standard electrical controls system designs. Automatic processes include wire numbering, component tagging, report generation, generation of bills of materials, creation of PLC I/O drawing from spreadsheets, and more:

Organize, find, and reuse valuable design data fully integrated data management tools. Easily and securely store, manage, and share work-in-process design data.

Bidirectional interoperability with Autodesk® Inventor® Professional software adds valuable electrical controls design data to a digital prototype created in Inventor.

Exchange data with customers and suppliers through the DWG format.

Automatically convert data into intelligent AutoCAD Electrical designs without losing previous customizations or spending hours on rework.

Special Promotion for Autodesk Inventor Suite 2009

Autodesk Inventor Software is the foundation for Digital Prototyping, producing an accurate 3D model that validates the form, fit, and function of a design before it is built. The Autodesk Inventor product line provides an integrated set of tools for 3D mechanical design and documentation, creating routed system, and digitally validating design data into and minimize the need for physical prototypes. Inventor lets users reuse valuable DWG data to build accurate 3D part models, reducing the risk of inaccurate data translations. Product bundle include AutoCAD Mechanical for associative 2D and 3D collaboration, and data management software to manage and track all the design components of a digital prototype.

Now there is a Promotion for Autodesk Inventor Suite 2009 which allow you to save up to 45%. Buy Autodesk Inventor Suite 2009 with Subscription at AED 20,000 and get one SpaceNavigator and one day training for free. This promotion is applicable for full Autodesk Inventor seats and will be valid until 15th October 2008 in the UAE only.

PIPENET VISION Software - New Version 1.31

New Version of Fluid Flow Analysis Software Modules Works "The Way Engineering Communities Already Work!"

1---> The CAD Department prepares a plot plan. This can be imported into PIPENET VISION as a .dxf file.

2---> The process engineer or the fire engineer draws the PIPENET VISION schematic on top of this. This is exported back to the CAD Department as a .dxf file.

3---> The pipers then draw a proper piping drawings.

ADVANCE STEEL Software

For more than 20 years, GRAITEC has been committed to developing high performance CAD and design software for the construction industry with a single goal: helping our customers achieve and surpass their objectives by providing them with the tools they need to meet and exceed their design creation and quality requirements. With the launch of **Advance Steel** at the end of 2002, and more recently the launch of **Advance Design**, GRAITEC became the only software provider in the world offering a complete suite of fully compatible and integrated products covering design and detailing for the reinforced concrete and steel construction industries.

Are you looking for and capable to automate your Project's entire Structural CAD Process (Fabrication, Erection Drawings, Various Reports and NC Fabrication Data Creation)?

ADVANCE STEEL is the #1 Structural Steel Modelling and Detailing Software for AutoCAD in the world. No more need for the more expensive steel structure software products.

Affordable, short learning curve and supported by ImageGrafix, the #1 Engineering Software Provider in the region.

By clicking the below link, we hope the answers to your common questions will convince you to further consider **ADVANCE STEEL** as a solution to your challenges.
